

WHAT IS CLAIMED IS:

1. A mobile telephone set comprising:
display means for displaying information including
telephone numbers or characters comprising;
5 a first address data bus connected to principal
integrated circuits such as control means and storage means; and
a second address data bus for connecting said control
means and said display means independently of said first address
data;

10 wherein said control means controls said first address
data bus and said second address data bus independently.

2. A mobile telephone as claimed in claim 1, further
comprising communication means for transmitting signals via a
radio line

15 wherein said control means is controlled to prohibit
access to said second address data bus while said communication
means is receiving signals.

3. A mobile telephone as claimed in claim 1, wherein
said second address data bus is driven by lower voltage than said
20 first address data bus.

4. A mobile telephone as claimed in claim 1, wherein
in the case of accesses other than access to said display means,
the second address data bus is inhibited to actuated.
